The town of Kellogg, Minn., opened a new park that allows visitors to view a replica of the International Space Station on an inner-tube-shaped structure. Called the ISS Viewing Tube, the floating structure gives visitors an aerial view of the orbiting laboratory. The ISS Viewing Tube is a 350-foot-tall floating geodesic truss structure that houses an electronic and robotic viewing platform. The entire structure can be moved around the park to provide viewing points that visitors can access. The idea behind the design was to create an outdoor museum that would allow visitors to view the views of space and the U.S. space program from a unique vantage point. The ISS Viewing Tube was constructed in a space where there is no wind, and it is anchored to the ground via hydro jets. It was constructed by AECOM. The project was partially funded by the \$15 million National Center for Earth and Space Science Innovation (NCESSI) at the University of Minnesota's College of Science and Engineering, part of the Carl R. Schelsky Center.

Q: How to connect to a WiFi network in android? I want to connect to a wifi network by my android code. I don't know if this is possible or not? Is there any code sample available? Thanks

A: Check this, try this... import android.app.Activity; import android.content.Context; import android.net.wifi.WifiManager; import android.widget.Toast; public class WifiConnectActivity extends Activity { WifiManager mWifiManager; /** Called when the activity is first created. */ @Override public void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.main); mWifiManager = (WifiManager) getSystemService(Context.WIFI_SERVICE); mWifiManager.setWifiEnabled(true); } @Override public boolean onCreateOptionsMenu(Menu menu) { getMenuInflater().inflate(R.menu.main, 2d92ce491b
