The \$20 million development program, managed by the state, includes the state-owned Telesat Direct Broadcast Satellite (DBS) facility. New Jersey-based Telesat, the world's fourth-largest DBS system operator, operates nine earth stations, including at the facility, in the state. The company has contracted with Murray Hill, N.J.-based Tricom Corporation to design and build the facility, with a project expected to be completed by the end of the year. "We are grateful for the state's support and participation," said Charlie Hieharn, Telesat vice president for New York state. Founded in 1978, Telesat has grown to serve 200 million people in 190 countries. With 23 earth stations worldwide, Telesat employs 2,700 employees. Telesat paid \$650,000 for the state's agreement to host the satellite. Telesat has an option to extend the agreement for an additional five years. The 5-million-pound Telesat satellite is planned to launch in 2020, from the location. Its coverage will span the United States, Canada, Mexico, the Caribbean, Central America and South America. The launch vehicle manifest for the satellite is scheduled to be completed by the end of this year. It is expected that the launcher will be manufactured in Quebec. The site, also known as Rocket Park, is on 280 acres in Morris Township. The facility is the fourth site in the state to be designated as a rocket launch site. The first test launch will occur in late 2020 or early 2021. The first satellite will launch from the site by the end of 2023. A similar facility, originally known as the Indian Point Site, was created in the 1960s at a former site of 2d92ce491b
