If you have a database that contains more than 40,000 objects, you will not be able to perform the upgrade. The upgrade will fail with the error message "File size is too large." If you encounter this error message, you can continue to upgrade your database. You will have to perform the upgrade again when the file size limit is reached again. NOTE: If you encounter an error message when you perform a database upgrade, contact Technical Support for assistance. When you are ready to upgrade the database, see Upgrading the database. See Upgrade to a larger database (View or Download) for the required size of your database before upgrading. \*NOTE: If you experience performance issues or database corruption during an upgrade, refer to the Microsoft Knowledge Base article 2055983 for troubleshooting suggestions.Q: Passing in one viewmodel from multiple Models in a data template I have a templated DataTemplate that is being populated by 2 separate models in a single view. The 2 models look like this: public class Model1 { public string Property1 { get; set; } public string Property2 { get; set; 2d92ce491b
