Excel formulas As of AutoCAD 2016, and for the foreseeable future, Excel is the only Microsoft Office application which can use AutoCAD's API, as AutoCAD 2011 for Windows cannot use VBA macros. This is due to the format of the AutoCAD object model. Excel 2007 was the first Microsoft Office application to support VBA macros and thus AutoCAD; however, it is not capable of working with AutoCAD 2011 objects. When the activation is finished, open the file ".\startup.bat" from ".\Program Files\Autodesk\Autocad 2020\bin" and modify it. Add the lines : - in the first line of the file : "-configure windows" - in the second line : "Configure the programs:" - in the third line : "-start" Then double click on ".\startup.bat". When the batch file is finished, open Autodesk Autocad. Now you can draw your model or import your file. Autodesk says : "If you wish, you can import some specific files from a hard disk." But it's not possible to import files from a hard disk because we have not installed the correct drivers on our computer. In the ".\Program Files\Autodesk\Autocad 2020\main" folder there is a folder : "drivers'" If you open it you will see a file : "comctl32.dll" So we can open the file ".\startup.bat" and replace all the lines by : "-configure windows" "Configure the programs:" "-start" "-comctl32.dll" And then we can open Autodesk Autocad. I have tested this on Windows 10 64-bit. Enjoy! This is one of my favourite games. I love the pokemon and the plot. The only thing that I don't like is the pokemon that appear. I mean, I don't mind seeing Alakazam, but what was with the pokemon that were from the beginning of the games! What were their names??? And I also didn't like that they all evolved. I wanted Pikachu to be the one that evolved but I guess that wasn't in the game. This is one of my favourite games. I love the pokemon and the plot.
