For instance, it's well worth pointing out that this app this app generates the pipe network drawings in DXF vector format, which makes it fairly CAD-friendly. There's also a handy built-in Documentation section, which should help you get to know everything there is to know about this app. That's not all, as the app is also capable of printing the generated profiles without the help of other third-party apps. In terms of features, it's also safe to say that this app has a lot of bases covered. Thanks to its plethora of built-in tools, you can start creating profiles of pipe networks without requiring anything more than a bit of patience. Assign values and instantly generate pipe networks Things are made even simpler when we take into account that the app bundles a few sample projects, not to mention various objects such as septic tanks, grease separators, sumps, fittings (dampers, ground and underground hydrants, pipe tees, milling valves, and elbows), as well as other types of objects which can be added to your projects with just a few simple clicks. For such a focused app, Drafter is pretty configurable, as well. Things like layers, tables, fonts, lines, and other types of parameters can be effortlessly tweaked to suit your preferences from the dedicated menu.
