
TCP-Com Free X64

TCP-Com Product Key is a software based RS232 to TCP/IP converter. TCP-Com allows any of the RS232 serial ports on your PC to interface directly to a TCP/IP network. For example, you can use TCP-Com to turn a PC into a "Serial Device Server" so that you can connect any RS232 serial device directly to a TCP/IP network and communicate with that device from any other workstation in the same network or across the Internet. TCP-Com can also help you create Virtual RS232 serial ports that are actually connections to a TCP/IP port, this allowing you to use existing Windows based serial communications software to send or receive data across a TCP/IP network. Attach data collection devices - modems, bar code scanners, sensors, gages, meters, RF equipment, telephone PBX systems, laboratory instruments, etc. - to the serial ports of your Windows PC and have that data available anywhere over any TCP/IP based network (ethernet, Internet). For example, you could connect a serial device (bar code reader, electronic balance or electronic measuring instrument) to a COM port on your PC, run TCP-Com and then connect to the device from any other PC on your network through a TCP/IP socket connection. This would allow you to use TCP-Wedge, Telnet or any other TCP/IP communications software to read or write to the serial device directly from any PC located on the same network. TCP-Com can also be used to pass serial data

These commands will be converted into ASCII characters and sent across the serial port and typed into the PC or terminal at the remote end of the line.
