Create a path. * Make a selection using the Pen tool. * Create new layers. * Align and position layers. * Lock and unlock layers. * Group and ungroup layers. * Duplicate layers. * Load and save files. Photoshop

includes a drawing tool called the Pen tool () that makes it easier to sketch with shapes and text on your image. Once you're familiar with the Pen tool, you can use it to quickly sketch a new set of illustrations for your

book using the Brushes options (Control-T or Edit > Stroke). For drawing, you can use Photoshop's Pen tool, or you can draw with the white, black, and grey handles that appear in the Toolbox (Figure 6-1). In

addition to the Brush and Pen tools, you'll also find Pencil and Eraser tools. These tools come in various colors, making it easy to create specific types of strokes and outlines. Figure 6-1. The main selection tool

in Photoshop has many different options. Use the gray handles (Pencil) to draw and erase, the black handles to create circles and rectangles, and the white handles to add curves and hatch marks to the Pen tool.

Drawing Using the Brush Tool In addition to the Pen tool, you can also use Photoshop's Brush tool for drawing with

This article describes how to

use this software and how to
get good results. How to
download Photoshop and
Photoshop Elements
Photoshop Photoshop can be
downloaded from the Mac
App Store or the Adobe
website. To download

Photoshop, follow these steps. Open the Mac App Store application. Click the App Store icon in the menu bar. Click Downloads at the bottom of the menu. Click Get macOS Now. Click Download. Click Install.

Click the Photoshop icon in the application window and then click OK. If you don't see the icon, look in the downloads folder in your Documents folder. Click the application icon to launch Photoshop. A word about

downloading paid apps from the Mac App Store. If you plan to download the latest Photoshop version for use on a Mac, it's a good idea to wait for the update to be available in the Mac App Store. Every month, new

updates are made available.

And unlike the Adobe website where you can't see what the changes will be, you can view the updates in the Mac App Store. They are usually very minor updates, such as bug fixes and

performance improvements.
But you should be cautious if
you pay for a Photoshop or
other app. Adobe has a habit
of making a monthly update
to a product and then not
offering any other upgrades.
So you might find that

Adobe doesn't have any new features or minor updates to an app. And since you have to pay to upgrade, you can't just cancel your subscription if you don't want to keep paying. Photoshop Elements
You can download

Photoshop Elements from the Mac App Store. The Elements Lite and Elements subscription product are only available on Mac, so you have to buy a Mac instead of Windows or Linux if you want to use Elements. Open

the Mac App Store application. Click the App Store icon in the menu bar.

Click Downloads at the bottom of the menu. Click Get Adobe Elements. Click Install. Click the Adobe Elements icon in the

application window. Click
OK. A word about
downloading paid apps from
the Mac App Store Adobe
doesn't offer a free version
of Elements, so you can't just
get a free trial of the
software. So if you don't

want to buy Elements, you'll have to buy a license to use the software. But the Elements subscription is an excellent option for people who want to use Elements, but don't want to buy it outright. The subscription is

only available on Mac, so
you have to 05a79cecff

Q: Why does Python's benchmarking library measure twice the time for my simple data structure? I'm new to Python, and I am working on a project to find

the longest path through a directed graph using Dijkstra's algorithm. I've written a very simple directed graph with millions of nodes that iterates over every node in the graph, and keeps track of the longest

path to that node. The loop is intended to be the start of the Dijkstra's algorithm. I have written this, thinking that I would get a very quick time. When I profile the code, I get 20 million iterations in 1.5 seconds! Here's a snippet

of code from the code: while
(degrees[vertex] > 0): current
= vertex while
(degrees[current] != 0):
current = current -
degrees[current] #update
score #update degrees The
graph I've constructed from

the adjacency matrix of the graph is constructed here, and can be saved here I want to benchmark this loop. Currently, I'm using Python's standard benchmarking library. A snippet of code is:

```
import timeit def
```

```
do_the_thing(): while
(degrees[vertex] > 0): current
= vertex while
(degrees[current] != 0):
current = current -
degrees[current] #update
score #update degrees print
'Dijkstra's Algorithm' start =
```

```
timeit.default_timer()
do_the_thing() end =
timeit.default_timer() print
'Time: %f seconds'%(end-
start) For the graph described
above, it gives me 0.9
seconds - far too long.
```

we last saw Leia, Luke

Skywalker, Rey and Kylo Ren, the trio had a standoff on the island of Ahch-To as the first trailer for the next installment in the “Star Wars” saga hit the Web. We know that the lightsaber duels they’re going to have

over the next two hours will be spectacular. We now have the official opening weekend box office estimates for the film, which is expected to debut in the \$220 million to \$225 million range. The film is a major presence on social

media with a nearly 26 million fan Instagram follower count. Its goal seems to be to bring in as many new fans to the “Star Wars” franchise as it can, and it looks like its plan is working. “Star Wars: The

Rise of Skywalker” features appearances from Daisy Ridley, John Boyega, Adam Driver, Oscar Isaac, Lupita Nyong’o, Domhnall Gleeson, Kelly Marie Tran, Joonas Suotamo, Billie Lourd, Josh Gad, Anthony Daniels, Liuho

Apanui, as well as Mark Hamill, Carrie Fisher, and Billy Dee Williams. The film comes to theaters on December 20, 2019. Should “Rise of Skywalker” exceed its opening weekend estimates, it could be

considered a major financial success. In 2016, “The Force Awakens” debuted with \$247 million in the U.S., and in 2017, “The Last Jedi” debuted at \$220 million and wound up with \$870 million. Another film set in the “Star

Wars” universe is the “Solo” spinoff, which is due out in December of 2018. “Solo” has a \$290 million opening weekend estimate, but it’s
